Reasons For Allowance

1. The following is an examiner's statement of reasons for allowance: Boike et al. (U.S. Patent No. 6,959,376) teach a system-on-a-chip (SoC) integrated circuit containing multiple digital signal processors (DSPs). In an embodiment of the invention, the integrated circuit includes two or more DSPs and a single host processor interface. Each DSP includes its own memory unit and a direct memory access (DMA) device (column 2, lines 3-8). Blackburn et al. (U.S. Patent No. 7,023,877) teach an apparatus for multiplexing a digital data input into DSL outputs. The apparatus may include a transceiver for providing connectivity to a digital data line providing 24 DS0 channels. The apparatus may also include at least one DSL transceiver for multiplexing DS0 channels onto corresponding DSL-compatible transmission media using DSL technology (Abstract). However, prior art of record fails to teach, or renders obvious, alone or in combination, an integrated digital subscriber line transceiver includes a single integrated circuit having a digital signal processing engine adapted to couple the transceiver to at least one digital subscriber line communication link. The single integrated circuit also includes a time division multiplexing framer adapted to couple the transceiver to at least one time division multiplexing communication link. The single integrated circuit further includes a static random access memory and a microprocessor. The microprocessor is coupled to the digital signal processing engine, the time division multiplexing framer, and the static random access memory as recited in independent claims 1 and 10. Prior art of record fails to teach, or renders obvious, alone or in combination, an integrated digital subscriber line transceiver includes a single integrated circuit having a digital signal processing engine adapted to couple the transceiver to at least one digital

subscriber line communication link and to at least one time division multiplexing communication link. The single integrated circuit further includes a static random access memory and a microprocessor. The microprocessor is coupled to the digital signal processing engine and the static random access memory as recited in independent claims 19 and 26.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
